SUMMARY

As a Software Engineering graduate, my technical foundation was built through 1 year of part-time experience as a PHP Developer. However, participating in a 2-month Big Data exchange program in China exposed me to large-scale data infrastructure and intelligent systems, which deeply inspired my transition into the data field. Today, I am deeply passionate about applying software engineering, AI, and data processing skills to construct real-world systems and extract actionable insights. Driven by a strong learning mindset and adaptability to new technologies, I am ready to transition my technical skills into impactful, data-driven roles.

EXPERIENCE

Data Engineer & Data Science Intern [Trinity Securities Co. Ltd] November 2025 - March 2026

- Developed automated ETL pipelines and AI-driven workflows for stock market analysis, financial transcription, and quantitative trading support using Python, SQL, and LLM technologies
- Built scalable data ingestion pipelines for financial data, stock pattern analysis, speech-to-text processing, and AI-generated summarization to support internal investment research operations
- Designed statistical and rule-based validation systems for stock analysis, improving data consistency, processing efficiency, and financial insight generation from large-scale market data

PHP Developer Part-time [Versatile Haus Co. Ltd] March 2023 - June 2023

- Engineered backend systems and collaborated with junior developers to handle database integrations, successfully reducing the time required for project execution.
- Developed and optimized over 10 corporate websites with customized functionalities, serving as a diverse portfolio of scalable options for prospective clients.

PROJECTS

Thai Stock News Transcriber

- Engineered an end-to-end data and AI pipeline for Speech-to-Text conversion for Thai stock market analysis and financial news content using Python, Gemini 2.5 Flash-Lite, Typhoon ASR, LangChain, and LangGraph
- Automated YouTube audio transcription, stock-name validation, and AI-generated summarization, reducing manual transcript processing time from hours to minutes
- Achieved low transcription error rates (WER 1.67%, CER 0.15%) for Thai financial terminology using context-aware AI correction and validation workflows

Daily Stock Suggest (Predict N+1)

- Developed a statistical pattern-recognition pipeline for global stock market momentum forecasting (Predict N+1) across 255+ assets using Python, Pandas, NumPy, and Parquet
- Automated ETL processes for daily price-data ingestion, sequential pattern matching, and conditional probability calculations, optimizing daily execution time from 30 minutes to under 15 minutes
- Engineered an alternative quantitative decision-making tool for daily stock suggestions, utilizing a continuous feedback loop of 5,000 historical bars and daily market updates to ensure statistically significant trading insights

SKILLS

- Programming:** Python, PHP, JavaScript
- Generative AI & LLMs:** Gemini API, Claude API
- AI Frameworks:** LangChain, LangGraph
- Database:** MySQL, SQLite, Firebase
- Tools:** Git/GitHub, Apache Airflow, Docker, Hadoop, Linux (Ubuntu)

EDUCATION

Rajamangala University of Technology Lanna | Chiang Mai

- Bachelor of Engineering, Software Engineering | Second Class Honour with **GPAX 3.62** 2023 - 2026
